Objective

To work with a company where I can get the opportunity to use my skills to contribute towards the mission of the company while enhancing my all blockchain skills.

Skills

- HTML, CSS, Bootstrap
- Javascript
- Nodejs
- Mongodb
- Solidity
- Truffle
- web3.js
- Layer 2 blockchain (Polygon, Cardano)
- Hardhat

Education

- **GBPIET, Ghurdauri,Pauri, Uttarakhand, 246194**   2022
  Graduation in Computer Science
  76%
- **Govt. Polytechnic Srinagar Garhwal**   2018
  Diploma in Civil Engineering
  73%
- **Rainbow Public School, Srinagar , 246174**   2015
  Intermediate
  71%
- **Rainbow Public School, Srinagar , 246174**   2013
  Highschool
  8 CGPA

Projects

- **Mobile recharge website**
  Built a full-stack web page in MERN stack where any user can recharge their mobile, DTH, broadband using many online payment method.
- **Nft Website**
  Worked on ethereum and Polygon mainnet and testnet to write, deploy a NFT smart contract and integrating it with frontend.

  Also the NFT'S can be breed or burned or use with it other Utilities.
- **Own cryptocurrency**
  Deployed a self written contract of own cryptocurrency token having a total supply of 10 Cr. which can be used to buy digital asset (NFT) or can be used to buy merchandise and much more in the Metaverse.

  It can be burnt and also it's even possible to liquidate this educational currency.
  It is live on Solana blockchain too.

- **Voting Dapp**

  Minor project work about a voting dapp completely built with solidity and web3.js
  One whitelisted user can vote only one time until the next voting starts.
  It is live on ropsten testnet.

- **Crowdfunding Dapp**

  A simple crowdfunding dapp intended to show for major project work. The contracts were written in Solidity and the
  app was utilizing the Truffle framework. The frontend of the app was built with React and Bootstrap.
  It is live too on ropsten testnet.

- **College Students website**

  Built a website on MERN stack where user can add questions and answer to help each other. No question can
  be uploaded twice. Data is saved on mongodb and frontend built with react.

Experience

- **Truelancer**   **01/08/2019**

  Full Stack web developer
  - Efficiently developed full-stack web applications with frontend in React, Backend using Express & Nodejs and
  Mongodb as database.
  -I can work with back end developers, front end developers, quality testers, etc as needed.
  -Fixed bugs on a company website, significantly improving web functionality and speed.

- **Ethereum**   **01-11-2020**

  Solidity Developer

  - Development of smart contracts and unit tests, deployment scripts on both ethereum and layer2 blockchain
  using Hardhat, Solidity, Ethers.js, Web3.js and Typescript.
  - Proficient in writing on smart contract and integrating the deployed contract with the provided frontend.

- **Solana Blockchain**   **01-07-2021**

  Nft Project Developer

  - ERC20,ERC721,ERC1155 Nft contracts development with on-chain metadata.-

  - Development of Rust smart contracts for NFT minting and renting with whitelist, reveal and
  staking of NFT's.
